

Veinlite PEDI2[®]

The World's Best Vein Access Device for Pediatrics

The Veinlite PEDI2 is a clinically proven pediatric vein finder that simplifies and improves venous access in children ages 0-17. PEDI2 uses side transillumination to make the veins more visible and accessible. Its compact design enables healthcare providers to quickly and accurately locate suitable veins for IV access in pediatric patients. It helps reduce the time and discomfort associated with traditional techniques for finding small or faint veins. It can be used anywhere on the body, even on the scalp. With the Veinlite PEDI2, veins can be mapped to avoid valves or bifurcations and find the best place for safe access.

Why choose Veinlite PEDI2

- Clinically proven Veinlite technology*
- Fewer IV access failures
- Improved patient satisfaction
- Small and compact design
- Three levels of brightness
- Works on pediatric patients of all ages and skin tones
- Meets INS and CDC Guidelines for infection control
- FDA and CE registered
